

Model: MONACO
Code: IN227WB
Colour: WESTLAKE BLUE

DESCRIPTION

Work trousers made of mechanical stretch polycotton, which combines the durability and resistance of polyester with the softness and comfort of cotton, while offering exceptional flexibility thanks to its stretch weaving. Featuring two large side multifunctional pockets, two front pockets and a back pocket, the Monaco trousers are designed to keep tools and accessories close at hand, maximising work efficiency. The elastic waistband and accentuated back yoke provide additional protection for the lower back, ensuring support and comfort during long working hours. Pre-shaped knees adapt to the natural shape of the body, allowing greater freedom of movement and reducing fatigue. The triple stitching increases the resistance of the trousers to wear and tear, while the central zip closure and the scratch-resistant rubberised button ensure practicality and durability. The rear tubular loop adds a further functional element, making it easier to attach accessories or work tools. A distinctive detail of these U-Power work trousers are the reflective bands sewn onto the bottom of the legs, which improve visibility in low light conditions, increasing user safety in potentially dangerous working environments. Work trousers ideal for: transport and logistics, building and construction, service and industry, gardening and agriculture. The product is also available in bundles of 20 (code CY227).
